

Project: Gillette Stadium
Foxboro, MA
Completed in 2002

System: Sarnafil G410 adhered
Total Area: 167,100 ft²

Architect: H.O.K Sports Facility Group, Kansas City, MO

Sarnafil and John F. Shea Company Unmatched Performance

Sarnafil Inc. and John F. Shea Company have worked together since 1981, building a strong relationship based on a mutual desire to provide roofing specifiers and building owners with the best performing roofing solutions on the market today.

From the initial design stage of a roofing project through to final inspection and warranty issuance, Sarnafil and John F. Shea Company offer their customers the peace of mind that comes with knowing they've selected the right roofing solution – and that it's installed properly.

About John F. Shea Company

John Shea founded the company in 1917. More than 80 years later, the company has grown to 65 knowledgeable employees, and has been passed down through three generations of Sheas. Today we remain a family-owned and operated business, specializing in single ply, slate and copper roofing systems for commercial buildings. Since 1981, we've installed more than two million square feet of Sarnafil membrane throughout eastern New England.

Sarnafil's Elite Partner Program

Only experienced Sarnafil applicators are invited to participate in Sarnafil's Partner's Club program. As an "Elite" level member, John F. Shea Company has proven itself through consistent, quality applications of Sarnafil's roofing systems. Elite level contractors must meet rigorous criteria to become recognized as the best applicators in the industry.

Together, Sarnafil and John F. Shea Company offer you a successful roofing installation that will stand the test of time. For over 38 years, Sarnafil's energy efficient single ply roofing systems have proven themselves on rooftops around the world, under all weather conditions.

Selecting a team with experience and commitment to quality is the key to both a successful roofing installation and long-term performance.

Gillette Stadium

Gillette Stadium is the home of the New England Patriots football team. The biggest challenge for John F. Shea Company during this project was the sheer amount of roofing that had to be done, from press boxes to concession stands. Of the 20 sections to be roofed, all but three of them were to be 100 percent Sarnafil. The other three were sheet metal projects, but even these had some Sarnafil membrane on them.

John F. Shea Company employed two foremen on the project – one for roofing and one for sheet metal – to coordinate everything with the general contractors. On each building, the roofers installed a vapor barrier, tapered Sarnatherm insulation, Dens-Deck®, and then the Sarnafil membrane.

Today, the New England Patriots' Gillette Stadium is a modern, attractive facility that boasts long-lasting Sarnafil roofs that will protect fans and media for many years to come.

Contact John F. Shea Company for more information about how your next project can benefit from a Sarnafil roofing system.
